REPORT ON ECONOMIC AND COMMERCIAL CONDITIONS IN IRAN FOR THE YEARS 1954 AND 1955

CHAPTER I—INTRODUCTORY

Iran is a sparsely populated country of approximately 20 million people scattered over an area of 628,000 sq. miles, that is about half the size of India. It is a vast table-land averaging 3,000 feet in height and surrounded on all sides by mountains except in the east where it connects with the plateau of Afghanistan and Baluchistan. There are forests in the north and west, and the river Karun flowing into the Persian Gulf is the only navigable river. The climate is generally dry except in the areas bordering the Caspian Sea, where there is comparatively heavy rainfall, and in the Gulf areas of the south. Of the total population, about 1 million persons are Sunni Muslims, 10,000 Zoroastrians, 40,000 Jews, 50,000 Armenians, 20,000 Nestorians and also some other Christians and Bahais whose number cannot be estimated. The remaining are Muslims of the Shia faith.

- The official language in Iran is Persian, but commercial correspondence with firms abroad is normally conducted in French or English. For purpose of official correspondence with the Iranian Government it is essential, if English is resorted to, for the Persian translation to be appended alongside.

Eighty per cent of the population is dependent on agriculture and not more than 10 per cent on industry. Living standards of the masses are relatively poor. Income per head per year is approximately \$85. The Iranian population may be divided into the following classes: (1) land-holding class, (2) merchants and professions, (3) artisans and peasants, and (4) landless labourers. Thriving merchant importer and exporter groups conduct trade and commerce in major Iranian cities with headquarters in Tehran. Industrial development of the country is seriously handicapped by an inadequate transportation system and lack of electric power.

The legal monetary unit is the rial of 100 dinars. 10 rials make a toman, and the official exchange rate, fixed in February 1955, is Rls. 15·75 to a rupee. Iran follows the metric system of weights and measures. Their year commences generally on March 21.

CHAPTER II—ECONOMIC SURVEY

Since the nationalisation of oil in 1951 till the settlement of the oil dispute in 1954, economic developments in Iran have passed through three stages. The first stage lasted for a year and a half when the great source of revenue was held in abeyance and there was no reduction in the scale of imports, and exchange funds were used for payments. The second stage lasted for one year till the end of 1953. This stage was characterised by an ever-increasing pressure of inflation as the exchange funds were completely used up and the volume of imports reduced as a result of which the rial lost its former value (Rls. 83·7 to a dollar), and restrictions were imposed on imports. The third stage began with the fall of the Mossadeq Government in August 1953. The succeeding Government of Gen. Zahedi published the details of the debt incurred during the Mossadeq regime, which was Rls. 17,705,125,040 equivalent to \$211,530,765. The extension of U.S. financial aids amounting to \$34·1 millions is one of the most important characteristics of the third stage. Relying on these financial aids, imports were increased again and the deficit in the balance of international payments was converted into a surplus, as under—

				\$Millions
March 1951	+ 3·5
„ 1952	—69·1
„ 1953	—20·8
„ 1954	+30·7
„ 1955	+ 4·7

In the year 1952-53, Government mainly relied on the resources of Bank Melli Iran. In the remaining months of the Iranian year 1332 (1953-54) the expenditure of the Government was increased because of the extension of reconstruction programmes. Iranian economy during the past two and a half years was considerably under the pressure of inflation. The most important problem facing the Iranian Government was to reduce the budget deficit and to do away with inflation. The index of wholesale prices rose as seen below—

1951-52	631
1952-53	671
1953-54	857
1954-55	945

Another problem was to rehabilitate the oil industry, which provided 30 per cent of the Government's revenues and one-half to three-fourths of its foreign exchange income and which would finally put an end to such a rise unless the Iranian Government desired to rely on foreign aids.

The settlement of the oil dispute is the most important factor affecting the present economic situation in the country. The actual oil production was resumed in October 1954, and after a three months "warming up" period, the production from January 29, 1955 to January 29, 1956 was 17,500,000 cubic metres of crude oil and 10,000,000 cubic metres of refined oil. The oil revenues paid to the Iranian Government during 1955-56 were \$90·2 million. With the flow of oil revenues again the Government have now an opportunity to take

stock of the situation and think more concretely in terms of finding solutions to the many problems that the country is faced with.

On the balance, the year 1955 was one of progress in the economic field. On the favourable side, oil production (and hence Iran's oil revenues) was on schedule (oil revenues were approximately \$90·2 millions in 1955-56); foreign exchange reserves increased from \$11 millions in September 1954 to \$20 millions in September 1955; the rise in cost of living was arrested (November/December 1954—1176, November/December 1955—1161); the rate of exchange was relatively stable (Rls. 15·75 to a rupee from February 6, 1955 onwards without change); the Government's international borrowing position improved; agricultural production was about normal and business in general was relatively good.

On the unfavourable side, the budgetary deficit remained at approximately \$5 millions per month. As in 1954, the deficit was met with U.S. aid funds of approximately \$76 millions for 1955. While some share (i.e. 10 per cent) of the oil revenues will be allocated to meet the budget deficit in 1956, the same gap is again forecast. Iran's development programme is still largely in the stage of formulation.

With the continued political stability the basis exists for continued economic progress.

CHAPTER III—FINANCE

(a) *General*—In general, 1955 was a year of increasing financial stability. The successful deflationary programme initiated in late 1953 continued to have its effect on the economy, although to a lessening degree. A major factor in reducing inflationary pressure was an "import surplus" programme to which the U. S. A. contributed \$6.5 millions in February 1954 and \$52.8 millions in February 1955. The rial proceeds of these aid funds were used for direct budgetary support.

The oil revenues to the Government of Iran and rial purchases by the oil consortium (\$40 millions) for its operating expenses were of importance in contributing to an atmosphere of improved financial stability. Oil revenues continued to go to the Plan Organization for development purposes (\$54 millions in 1955) and to the N. I. O. C. (\$27 millions) for certain capital expenditures and to cover losses on domestic sales of petroleum products. For various large scale development projects of the Plan Organization the engineering surveys have been completed.

The Bank Melli's foreign exchange holdings improved (from \$36,381,875 on 22nd September 1954 to \$69,830,929 on 22nd September 1955) by the consortium's rial purchases (for operating expenses), rial purchases by the Plan Organization, foreign aids for budgetary support, and also conversion operations by the U. S. O. M. (Point IV). Increasing concern was felt over the development of a larger budget deficit than had been forecast.

(b) *Foreign Exchange*—The total gross foreign exchange holdings of the Bank Melli Iran as on the 22nd September 1955 amounted to \$69,830,929. The foreign exchange position subsequently deteriorated to the point where it was announced in October 1955 that additional letters of credit for imports would not be opened until further notice. The foreign exchange reserves dropped from \$31.2 millions on 23rd June 1955 to \$1.4 millions on 16th October 1955. The critical period ended on 29th October 1955 when the Plan Organization sold £4 millions (\$11.2 millions) to the Bank in response to an urgent appeal from the Governor of the Bank. Chiefly because of this transaction, the Bank holdings increased to \$14.6 millions on 8th November 1955 and the Bank was able to relax its restrictions on the sale of exchange for Category I (essential) goods imports. By the end of December, the balance of commercial exchange certificates available at the Bank was \$10.6 millions, and the normal foreign exchange sales have helped the Bank to see through the remaining months of the Iranian year 1334 (i.e. up to the 20th March 1956).

(c) *Rates of Exchange*—Iran's foreign exchange control has been characterised by multiple rates. Before the nationalisation of oil the Anglo-Iranian Oil Company obtained rials for local expenditure by converting its exchange at the official rate of approximately Rls. 32 to the dollar as against the commercial rates ranging between Rls. 40 and 50 to the dollar. After oil nationalisation, multiple rates were designed to stimulate exports and limit imports. As exchange reserves dwindled, efforts to peg the rate were abandoned and supply and demand forced the value of the rial (as applied to commercial transactions) down from Rls. 50 to a dollar to Rls. 130. After a number of currency appreciations, the commercial rate for Category I

(essential) imports has been successively reduced to Rls. 75 (buying) and Rls. 76·5 (selling) to the dollar in August 1955 in accordance with a decree of February 1955. Since then there has been relatively little fluctuation in the open market. In accordance with this decree, the Bank disposed of approximately \$ 50·7 millions in exchange purchases prior to the appreciation, and importers were required to purchase half their exchange at Rls. 82·5 and half for Rls. 76·5 to a dollar making an effective rate of Rls. 79·5 per dollar. From the 16th August 1955 the rial deposit required by the Bank Melli to obtain foreign exchange for importation of Category II (non-essential) goods was reduced from Rls. 82 to Rls. 80 per dollar. At the same time, the Bank announced that the importers making such deposits would have to redeem their deposits through presentation to the Bank of Category II exchange certificates within one month from the date of the deposit or the original transaction would become final. Previously, the importer had a three month period for redeeming his deposit.

(d) *Money in Circulation*.—During the year, the note issue increased from Rls. 11·5 billions to Rls. 11·9 billions. The Bank Melli holdings increased by an even greater amount from approximately Rls. 1·4 billion to Rls. 1·9 billion, placing the Bank in an extremely liquid position.

(e) *Fiscal Policy*.—Iran's growing budget deficit caused increasing concern during 1955. The U. S. grant of \$ 5 millions helped the Government in disbursing salaries of Government servants. The Government's original budget for the year 1334 (ending 20th March 1956) was Rls. 14·8 billions of expenditure and Rls. 12·1 billions of receipts. Thus, a net deficit of Rls. 2·7 billions (\$ 35 millions) was foreseen, but actually at the end of the year the expenditure came up to Rls. 16 billions against receipts of Rls. 11·4 billions with a net deficit of Rls. 4·6 billions (\$ 60 millions).

It is interesting to note, however, that in the present budget for 1335 (i.e. up to March 1957) expenditure of Rls. 19·7 billions and receipts of Rls. 15·8 billions, or a net deficit of Rls. 3·9 billions (\$ 52 millions), have been forecast.

Government borrowing from the central bank decreased from Rls. 3·8 billions to Rls. 3·5 billions during the year. Guaranteed borrowing increased from Rls. 5·8 billions to Rls. 6·2 billions. Thus, on balance, the Government's borrowing position remained practically unchanged for the year. Foreign exchange holdings increased approximately to \$ 14 millions and thus foreign exchange prospects are bright. In fact, if the Plan Organization purchases substantial amounts of rials from its sterling oil revenues and foreign aid continues to be sizeable, foreign exchange could build up fairly rapidly.

Bank Melli indices indicate that retail prices decreased somewhat. Knowledgeable observers agree that the cost of living as a whole is relatively stable with perhaps some slight rise. Unless or until Iran's development programme is greatly accelerated, inflation should not become a serious problem as long as the budget deficits continue to be met by means that are not inflationary.

The above adds up to clearly discernable improvements with respect to the cost of living, the exchange rate, Iran's borrowing position and foreign exchange position. On balance, optimism regarding Iran's financial future is warranted at least on purely economic and financial grounds.

CHAPTER IV—AGRICULTURE

In 1955 the agricultural situation was characterised by increased plantings in most crops, below normal weather conditions, and a reduction in yields. The winter was exceptionally dry followed by early spring rains and late spring frosts. The early spring rains encouraged the planting of larger acreages to wheat, cotton, barley and rice. If all crops are considered, decreased yields and increased plantings probably offset each other.

Barley and Wheat—The early spring moisture lasted long enough to mature the largest barley crop in Iranian history (880,000 tons), about 10 per cent above 1954. The Wheat crop suffered serious damages from draught and smut and rust infections, but was still as large (2,300,000 tons) as any previous crop. In spite of this large crop and imports of 40,000 metric tons in 1954, an additional 50,000 metric tons is expected to be imported before the 1956 harvest.

Rice—The rice crop was seriously affected by water shortage and in spite of an increase in hectareage planted, was only about 60 per cent of last year's crop. Total production is estimated to be 225,000 metric tons compared with 367,000 metric tons in 1954. Rice is sold at about the same price as last year (that is to say at \$ 150 per ton c.i.f. Manila).

Cotton—The cotton hectareage (325,000 ha.) planted was increased about 50 per cent over 1954 (which was due to the stable world market prices for cotton in recent years), but yields were sub-normal resulting in about the same production as in the preceding year. The total crop estimate was about 60,000 metric tons. Exports from the 1955 crop are not expected to exceed more than 35,000 tons compared with the reported 46,000 tons last year. Although more cotton is available for export, it is believed unlikely that export markets can be found. During the year the cotton prices declined an average of 22 per cent, of which about two thirds occurred after the 1st August 1955.

Cotton Prices

(Rls. per kilo)

				January 1955		January 1956
American	47—49.50	33—36	
Filestani	51—53	41—45	
Native	38—40	28—33.50	
Kookers	53—54	42—47	

Wool—Production of wool was about normal but export prices were about 15 per cent under 1954.

Wool prices

(Rls. per kilo)

				January '55	January '56
White scoured Khorassan		100	85—90
White greasy Khorassan		72	62—65

Dry Fruits—The spring frosts resulted in serious damage to all dried fruit and nut crops except raisins. Although date yields were affected by draught, their quality was exceptionally good. The short crop has resulted in higher prices for most fruits and nuts and some prices have more than doubled since the last year.

Tobacco—The reports furnished by the Government Tobacco Monopoly indicate that the tobacco crop is about the same as last year implying a reduction in hectarage planted and expected yield.

CHAPTER V—INDUSTRIES AND MINING

Apart from the oil industry, Iran's achievements under this head are limited. Principal organized industries are as under:—

- (1) Spinning and weaving (cotton, woolen, silk and jute),
- (2) Sugar,
- (3) Tea processing,
- (4) Cement,
- (5) Leather,
- (6) Oil extracting and soap plants,
- (7) Card-board factories,
- (8) Saw mills and plywood factories,
- (9) Canning,
- (10) Chemical factories,
- (11) Glass,
- (12) Fire-proof materials,
- (13) Matches, and
- (14) Tobacco.

Among the handicraft and cottage industries, the following are prominent—

- (1) Carpet making,
- (2) Silk weaving and embroidery,
- (3) Gunny and mat weaving,
- (4) Soap making,
- (5) Mosaic work,
- (6) Silver and enamel work, and
- (7) Pottery.

Mining activities are limited to:—

- (1) Coal,
- (2) Lead,
- (3) Copper,
- (4) Red oxide, and
- (5) Rock salt.

Cotton—There are 19 spinning and 12 weaving mills in Iran, employing a labour force of 7,811 workers and 11,142 workers, respectively. Four of the weaving factories are owned by Government and the others are either individual ownership concerns or joint stock companies. The total spindlage is approximately 325,000 out of which about 25,000 to 30,000 are out of commission. The yearly overall output is 64,497,939 metres (1954-55) and 4,924,263 bundles of yarn. The average annual consumption of cloth in Iran is 240 million metres. The difference between the overall demand and internal production is met by imports from abroad.

Wool—There are altogether 12 mills employing 7,721 workers and producing 4 million metres of woollen textiles annually. All these mills are private owned and are located in Isfahan. Of these mills, 4 are the most important with a loomage of 340 and a spindlage of 18,480, producing 2,368,625 metres of cloth, including blankets. These woollen textiles are not of a high quality as the quality of indigenous wool is low grade. The indigenous wool (Khorasan and Kurdistan wool) contains 70 per cent good wool and 30 per cent refuse. A small quantity of Australian wool is imported for mixing purposes with the local wool for better quality suitings and blankets.

Silk—There are two silk factories in Iran employing 1,370 workers. One is at Chalus and the other at Resht. Both the factories are State-owned. The factory at Chalus has 300 looms and produces about 600,000 metres of silk piecegoods and 24,000 pairs of ladies' stockings per year. The other factory produces only 85 tons of silk yarn per annum.

Jute—There are in all three State-owned spinning and weaving plants, two at Shahi and one at Resht, employing 1,248 workers. The annual output of these factories is 5,350,000 metres of hessian cloth including bags, jute rugs, etc.

Hosiery & Knitting—There are about 36 small factories (22 private individual-owned, 3 joint stock companies and the rest limited companies) making hosiery and knitwear and approximately 450 hand-machines equipped to produce all types of men's and children's wear, but not of high quality. The local product enjoys a ready market because of the ban on the import of similar goods from abroad.

Sugar—There are 10 Government-owned beet sugar factories in Iran employing 1,079 permanent workers and 4,082 seasonal workers. The capital invested in these factories amounts to Rls. 453 millions. The total production of these factories during 1954-55 was 44,121 tons of lump-sugar and 17,602 tons of granulated sugar. These factories consumed about 443,887 tons of beetroot during the same year. In addition to the home production, Iran imported 212,561 tons of sugar from abroad during that year, mainly from U.S.S.R., U.S.A. and Cuba. The imports from U.S.S.R. were against the barter deal between that country and Iran, and imports from U.S.A. formed part of the dollar aid given to Iran.

Tea—The total area under cultivation is estimated at 14,000 to 15,000 hectares and the annual indigenous production of tea is about 4,000 tons against the total average consumption of 12,000 tons. The shortfall between the internal production and the overall consumption is met by imports, mainly from India. There are about 95 tea processing factories employing about 2,000 workers, and having a capacity of 14,000 tons per annum. Six of these factories are Government-owned and the others are all either joint stock companies or private-owned. Most of the factories are located in the north near the Caspian Sea.

Cement—Of the three cement factories in Iran, two are Government-owned, and the other one is a private concern. These factories employ 1,441 workers and produce approximately 65,000 tons of cement per annum. Another private factory is being built at Aminabad with a daily capacity of 200 tons and it is expected that it would go into production from November 1956. The price of local cement is Rls. 1,900 per ton.

Leather—There are in all 30 tanneries in Iran including small factories employing 1,455 workers. Ten of these are joint stock companies, 8 are private-owned, and the rest are limited companies. The total production of these factories during 1954-55 was as under—

Shoe uppers	1,955,000 pieces
Sole leather	2,040 tons
Salambur leather	4,176,000 pieces

These factories are located at Tabriz, Hamadan and Teheran. Import of leather goods is prohibited. The business is very lucrative as the internal demand is very great.

Oil Extraction Plants and Soap—There are 20 oil extracting plants employing 1,225 workers and producing about 23,160 tons of vegetable oils per annum. Ten of these factories are run by joint stock companies, one is Government-owned and the others are limited companies. The Government plant at Varamin produces 1,800 tons of cotton seed oil, olive oil etc.

There are also 16 soap-making factories employing 841 workers and producing about 5,840 tons of washing soap and 34 million cakes of toilet soap. These factories also produce 43 tons of glycerine. It may be stated here that soap and glycerine (except for medicinal purposes) are prohibited items for import. Of these factories, one is Government-owned and the rest are either joint stock companies or limited companies.

Cardboard and paper—Altogether there are 7 cardboard factories employing 269 workers. Six of them are located at Teheran and the other at Karaj. These factories are all private-owned and manufacture mostly cardboard of the thickness of 3 mm. for packing. A paper mill with an yearly output of 4,000 tons has been installed at Varamin and another factory is nearing completion at Shiraz.

Plywood—There are two plywood manufacturing factories, private-owned, employing 153 workers and their annual output is 540,000 sheets of 3 and 5 layers.

Canning—There are a number of canning factories with an estimated annual output of 23,440 cans and 16,000 other packings. Of these factories only two are Government-owned and the others are private-owned or are joint stock companies, employing in all 534 workers. The Government-owned factories are located one at Bandarabbas and the other at Shahi.

Chemicals—In all there are six chemical factories employing 46 labourers. Four factories are Government-owned and the other two are run by joint stock companies. The total production during the year 1954-55 was: caustic soda 1300 tons, sodium acetate 2,50 tons, sodium sulphate 65 tons, hydrochloric acid 80 tons. Apart from this, there are several factories owned and run by the Army producing sulphuric acid, nitric acid and wood alcohol.

Glass—During recent years there has been considerable progress in the manufacturing of glass and tableware. There are about 21 factories employing

2,466 workers and producing in all 10,000 tons of various kinds of glass and tableware, 16,000 sq. metres of window-panes and 2,400,000 bottles. Of these factories, 16 are private-owned and others are either joint stock companies or limited companies.

Firebricks and tiles—There is only one Government-owned firebrick factory employing 230 workers and producing magnesium firebricks and chrome bricks. The yearly output is estimated at about 37,000 tons.

Matches—About 4,500 workers are employed in 48 match factories producing 408,951,000 boxes of matches. Iran is self-sufficient in matches which is incidentally a Government monopoly, and import is prohibited.

Cigarettes—This is also a State monopoly and there is only one factory in Teheran. During 1954-55 it produced 6,680,923,000 cigarettes and 2,589 tons of tobacco for hookah.

COTTAGE INDUSTRIES

Carpets—This is the most important cottage industry of Iran. Apart from oil, carpets constitute the largest single item of export. Unfortunately, however, there are no statistics of carpet production, and it is estimated that the production is about 10 to 20 per cent more than the annual exports of carpets. Exports during 1954-55 from the various centres of carpet production were as follows—

				Weight Kgs.
Kerman	473,480
Isfahan	166,839
Kashan	139,224
Tehran	35,120
Qum	4,271
Tabriz	807,524
Meshed	65,632
Hamadan			.	568,125
Others			.	2,296,299
Total				4,556,514

The total value of the exports was Rls. 1,255,435,000. There is one Government-owned factory by the name of Iran carpets with 2,363 looms producing 30,000 sq. metres of carpets per annum.

MINING

During 1954-55 a new impetus was given to the production of minerals. Unfortunately, the production figures of private-owned mines are not available.

Coal—It is estimated that there are altogether 43 coal mines distributed over the country as follows—

Tehran and environs	17
Mazandaran	12
Tabriz and Razaieh	1
Khuzistan	2
Kerman
Korasan	6
Isfahan	3
				<hr/> 43 <hr/>

Of these, 8 are Government-owned and 35 are private-owned. Only 7 mines are being worked now, employing about 2,600 workers in all and producing 50,000 tons of coal annually. Preliminary surveys have been made in coal mines of Dorood and Azna areas to determine the extent of coal reserves in those regions.

Sulphur—There are 11 sulphur mines in the country distributed as follows—

Tehran	1
Mazandaran	2
Tabriz and Razaieh	1
Khuzistan	1
Shiraz	4
Kerman	2
					<hr/>
					11

Of these 5 are Government-owned and these Government mines have not produced anything in the recent past. Information about the workers employed, quality, and production of the private-owned mines is not available.

Copper—There are 32 copper mines distributed as follows—

Tehran and environs	15
Mazandaran	2
Tabriz and Razaieh	2
Luristan	1
Khorasan	2
Isfahan	10
				<hr/> 32 <hr/>

Of these, 4 mines are Government-owned accounting for a production of 1,180 tons during 1954-55. There is a Government-owned copper refinery near Rey

own which employs 177 labourers and produce, 382 tons of refined copper annually.

Lead— There are more than 10 lead mines, small and big, located in the following places—

Teheran and environs	24
Mazandaran	37
Tabriz and Razaieh	2
Luristan	1
Khuzistan	3
Kerman	5
Khorasan	11
Isfahan	31

Five of these are Government-owned employing more than 1,500 workers, and producing more than 19,000 tons of lead ore. Producing of refined lead during 1954-55 was estimated at 380 tons.

Red-oxide — here is only one mine owned by Government at Hormoz island. The annual production of this mine is 10,000 tons of red-oxide containing 73 per cent of oxide of iron. Most of the produce is exported to Europe and America.

Mineral Ores—Export figures of mineral ores during 1954-55 are given below. Most of these ores are exported to U.S.S.R., Holland, Czechoslovakia, Belgium and Italy—

Variety					Quantity in tons	Value (c.i.f.) in Rls. '000
Magnesium	7,269	2,552
Chromite	11,050	10,763
Antimony	157	486
Lead	37,518	70,420
Others	2,035	2,430

CHAPTER VI—PETROLEUM

(a) CONSORTIUM OPERATIONS

During July/December 1955, approximately \$69 millions in the form of income-tax payments to the Government of Iran, "stated payments" to the N.I.O.C. and sterling purchases of rials were made by the operating companies. With these and previous payments and purchases, approximately \$ 145 millions has been added to the Iranian foreign exchange income since the resumption of oil production on 29th October 1954.

During the above period, the operating companies produced and refined a total of 8,881,000 and 3,563,000 long tons of crude oil, respectively. The crude production in November, totalling 1,518,000 long tons, was the highest monthly production in 1955. During the year 1955 (January 1955 to January 1956) the operating companies managed not only to meet their guarantee of crude production of 14,870,000 long tons and a refinery goal of 8,500,000 long tons, but to exceed each goal by slight margins.

1955 Achievements—Some of the more notable 1955 achievements of the operating companies were as follows—

- (1) Commissioning on 26th July of a new production unit in the Aghajari field designed to handle 150,000 barrels of crude oil per day. With this unit the field's capacity has been increased 50 per cent.
- (2) Construction of high pressure pipelines from the 7 producing wells at Aghajari to feed the new production unit mentioned above.
- (3) Rebuilding (between Aghajari and Bandarmashur) 11 miles of 16 inch flood damaged pipeline.
- (4) Commissioning in the spring of 1955 of a third jetty at the port of Bandarmashur to handle supertankers of 38,000 tons which cannot go to Abadan. The present capacity of Bandarmashur is 50 tankers per month.
- (5) Installation of 4 new pumps at Bandarmashur bringing the total to 9.
- (6) Erection of 8 new storage tanks at Bandarmashur each having an 18,000 ton capacity which permits an increase in the receipt of crude from Aghajari.
- (7) Commissioning of two 4,000 kilowatt generators at the Tembi power station for supplying electric power to the Masjid Suleiman fields.
- (8) Recommissioning in September of the Masjid Suleiman Topping Plant where present output is about 20,000 barrels of crude per day of which about 13,000 barrels are fuel oil.
- (9) Rebuilding of a production unit at Naftkel.
- (10) Reactivation of the giant catalytic cracker during October.
- (11) Completion of 38 routine overhauls and 50 major overhauls at the Abadan refinery.

1956 Development Plans—The following development plans have been announced by the operating companies for 1956—

- (1) Construction of a fourth production unit at Aghajari.
- (2) Completion of 30 miles of oil pipelines in the various fields.
- (3) Construction of a gas pipeline from Aghajari to Bandarmashur which will link up with an existing line to Abadan and permit gas to replace the fuel oil now being burnt at the refinery.
- (4) Construction of a fourth jetty at Bandarmashur to increase the present handling capacity of the port from 50 to 90 tankers per month.
- (5) Equipping of workshop at Ahwaz.
- (6) Continuation of the overhaul programme of the Abadan refinery.

Foreign Employees—Approximately 350 foreign personnel have been recruited to date by the operating companies. In spite of the originally estimated 300 foreign technicians required to assist in the operations, a total of between 400 and 500 will be needed.

(b) NATIONAL IRANIAN OIL COMPANY

An agency of the N.I.O.C. responsible for exploration and production in areas outside the consortium agreement, recommenced in November last in the Qum area, following signing in September of a contract between an American firm, Drilleco of Nevada and Iran Oil Company. This contract provides for the drilling of two wells in Qum area, and is a settlement of difficulties which had arisen earlier between the parties under original contract.

N.I.O.C. Sales Agreements

Three sales agreements have been concluded by N.I.O.C. during this period with foreign companies for a portion of 12½ per cent of crude oil which it elected to receive from the operating companies of the consortium in kind rather than in cash and for products produced at its Kermanshah refinery.

(1) *Idemitsu Agreement*—Under the agreement concluded with Idemitsu of Japan, the N.I.O.C. agreed to supply a minimum of 180,000 metric tons and a maximum of 210,000 metric tons of crude oil between July and December 1955 at Persian Gulf posted prices (\$ 1.91 per barrel of crude oil; 42 U.S. gallons=1 barrel). Payments were to be half in U.S. dollar and half in Japanese yen. This agreement, which was merely an extension of contract signed in 1953 between N.I.O.C. and Idemitsu, also called for the sale of 20,000 metric tons of refined products, when available, at terms to be agreed upon, payable in U.S. dollars. Under this and previous agreements, Japan obtained gasoline, crude oil, heavy oil, gas oil and kerosene from Iran.

(2) *Supor Agreement*—For the period July/December, under a barter agreement entered into between the Government of Iran and Supor of Italy, the N.I.O.C. agree to furnish to Supor 70,000 tons of crude oil per month

(from its portion of 12½ per cent stated payments by the oil operating companies). Rial payments equivalent to the Persian Gulf posted prices were reportedly paid to the N.I.O.C.

(3) *Turkish Agreement (Shargh Company)*—On the 31st October 1955, following protracted negotiations, N.I.O.C. signed an agreement with two private Turkish oil companies using the firm name of Shargh Company for the annual sale of from 35,000 to 40,000 tons of kerosene and benzine from its Kermanshah refinery for a three year period beginning early in 1956. Payment is called for by letter of credit, either in dollars or in sterling, and deliveries of approximately 3,000 tons per month are to be made at Kermanshah to the Turkish company which will provide the necessary transportation to Turkey.

Prospective Sales Agreements

Negotiations between the N.I.O.C. and Idemitsu are being conducted for a portion of N.I.O.C.'s 12½ per cent share of 1956 crude production. The final outcome of these negotiations depends on Iran's willingness to sell this oil to Idemitsu below the Persian Gulf posted prices.

Pipeline Construction

The survey of the southern (Ahwaz to Azna—200 km.) portion of the Ahwaz to Teheran pipeline was completed and construction was begun in November last by a British firm. A French firm which is responsible for the construction of the Azna to Teheran section (600 km.) is to start in 1956. Present plans call for the completion of the Ahwaz-Azna section in 1957 and the entire line by 1958.

CHAPTER VII —TRANSPORT AND COMMUNICATIONS

The rail transport in the country is inadequate. The Trans Iranian Railway is running north to south from Bandarshah on the Caspian Sea through the capital Tehran to Bandarshapur on the Persian Gulf. The total length is 1,364 km. There is no direct rail communication to Meshed and Tabriz from Tehran. But before the war, work was undertaken to lay rails between Tehran and Tabriz. Work was completed between Zanzan and Minch by the Allied Forces for use in transporting material from Persian Gulf to the Soviet Union. The distance from Tehran to Minch is 440 km. The railway line is now being extended up to Tabriz. Work on the Tehran Meshed line was also taken up before the war and the Allied Forces laid the line between Garmsar and Shahrood measuring 316 km. This line was also used for strategic purposes during the war. Extension work on this line up to Meshed is now in hand. There is a small 130 km. rail link between Tabriz and Julfa on the Russian side of the border. The railways are under the control of a General Manager appointed by the Cabinet for a period of three years. He is assisted by three assistants on the technical, financial and administrative sides.

In view of the inadequacy of railways, people mainly rely on road transport. This mode of transport is mainly in private hands and is in no position to meet the demands made upon it; hence the Government are beginning to use Army lorries to move food supplies. The administrators of the United States aid have financed the purchase of some 800 medium and heavy lorries.

Shipping—The principal ports on the Persian Gulf are Bushire, Lingga, Bandarabbas, Khorramshahr and Bandarshapur. The total incoming tonnage of the ships entering Persian Gulf ports was 4,634,392 tons and the outgoing tonnage was 4,655,481 tons during the year 1954-55. The Iranian tonnage entering amounts to less than 1 per cent of the total. The Iranian owned vessels are in a minority among those using the ports on the Caspian Sea which include Pahlavi and Bandarshah. The most important shipping company between India and the Persian Gulf ports is the British India Steam Navigation Company. Some chartered ships of the Bharat and Moghul Lines also ply between Calcutta/Karachi and the Persian Gulf ports carrying cargo. The following are some of the other shipping companies whose vessels ply between Iranian ports and Europe, U.S.A., etc.—

- (1) Eastman Ship & Co.
- (2) Christim Ship Co.
- (3) Silver Java Pacific Lines.
- (4) Holland-Persian Gulf Lines.
- (5) Frank C. Strick & Co.
- (6) Ellerman & Co.
- (7) Swedish East Asia Company.
- (8) Herlefsen Lines.
- (9) Merck Lines.
- (10) Iranian Shipping Company (recently established). There are some Japanese shipping companies also.

The freight rates between U.K. and European ports on the one hand and Persian Gulf ports on the other vary between 90 and 250 shillings per ton, depending upon the type of cargo.

Airlines—The Iranian Airways is a private limited concern administered by an American concern named Trans-Ocean Airlines Ltd. Its subscribed capital is Rls. 50,715,000 of which Rls. 20,700,000 has already been paid up. This Company at present owns 6 Dakotas, 1 Beachcraft, and 2 D.C.-4s. Other airlines linking Iran with the outside world are Pan-American Airways, Scandinavian Airlines System, Air France, K.L.M., Iraqi Airways, Misrair, etc. There are also some chartered services by Persian Airways between Kuwait and other Persian Gulf ports.

At present there is no direct air service between Iran and India. The service between Tehran and Bombay of the Iranian Airways was discontinued more than two years ago. It has caused some inconvenience to businessmen who were doing direct business with India.

CHAPTER VIII—ECONOMIC DEVELOPMENT

The year 1955 was the last year of the original seven year programme under which the Plan Organization was established to utilise Iran's oil revenues for economic development. This period witnessed severe political unrest and the virtual cessation of oil production from 1951 to 1954 with consequent adverse effect on economy in general and development programme in particular. Although comprehensive statistics are not available, the Organization has manifestly fallen far short of the high hopes engendered by its creation. The year 1955 also marked the beginning of a period of renewed and expanded revenues from oil. The Organization's share was some \$60 millions in 1955.

The Plan Organization of Iran devoted the year 1955 to making plans and preparations for a new seven year programme. At the end of the year, the Government submitted a bill to the Majlis renewing the Organization's overall authority for carrying out a new development programme and outlining this programme by categories of projects. To assist this Organization in overall direction, a small technical bureau of foreign advisers has been organized with men of high calibre.

During the year, the Organization awarded a number of contracts which should eventually have a significant impact on the economy: construction of 6,000 km. of first class roads; improvement of six air ports, the physical rehabilitation ports, a programme of municipal development (schools, hospitals, power and water system, etc.); construction of two cement plants. The most publicized project is the proposed construction of Karaj Dam.

Other agencies of the Government also entered into development contracts. Progress was made by N.I.O.C. in laying an oil pipeline from Khorramshahr to Tehran. The Ministry of Posts and Telegraphs and Telephones reached an agreement with the German Ministry of P.T.T. for large-scale development of telephone facilities, and with a French firm to make a survey for installation of a national telecommunication network. The Tehran Municipality contracted for the purchase of six generators with an output of 62,000 kilowatts.

The Plan Organization has maintained the position that the credits offered by the United States, the U.K. and France should not be utilised until it is clear that the Organization faces a shortage of foreign exchange. Various ministries, however, which do not have access to Iran's oil revenues propose to utilise these credits. The Ministry of Roads has applied for two loans against the U.S. Export-Import Bank credit of \$53 millions which has been approved and the second for \$17.5 millions to purchase highway equipment. The Cabinet has approved certain drawings against the British credit of £10 millions.

CHAPTER IX—ECONOMIC LAWS, DECREES AND REGULATIONS

(1) *New Income tax Law*—A new Income-tax Bill was submitted by Government to Parliament in June 1955. The intention of this law is to collect taxes, progressively, so that Iran's recurring budgetary deficit can be met through tax revenues without recourse to the use of oil income. The bill was enacted by the Joint Commission of Parliament into a Law early in August 1955.

(2) *Foreign Investment Law*—On April 24, 1955, the Majlis (Lower House of Parliament) approved the Government's proposed Foreign Investment Law and sent a draft bill to the Senate. After a prolonged study in committee and debate on the floor of the Senate on the 13th July 1955 it was returned to the Majlis with certain amendments incorporated therein by the Senate.

(3) *Import Quota Regulations for the Year 1334 (1955-56)*—On the 4th April 1955 the Iranian Government promulgated the new import quota regulations for the year 1955-56 which list and establish quotas for authorised goods, list prohibited goods and contain restriction of certain export items. Although the classification of goods in various categories is abolished according to the text of the law, subsequent action on the part of the Government has preserved the previous system of category I (essential) and category II (semi-essential and luxury) distinctions for both imports and exports.

On the August 16, 1955 the Bank Melli announced that its selling rate for category II exchange had been reduced from Rls. 82 to Rls. 80 to a dollar. The Bank Melli resumed the sale of category II exchange in the late spring of 1955 because of the high rates then prevailing in the open market.

(4) *Monopoly Tax*—On the 16th May 1955 the Government increased the duties on imported cotton textiles from Rls. 30 to Rs. 60 per kilogram. The Ministry of National Economy indicated that they expect this tax would yield Rls. 100 millions by the end of their fiscal year.

(5) *Prohibition against Import of Used or Re-conditioned Goods*—On the 31st March 1955 the Ministry of National Economy decided to enforce strictly the present prohibition against import into Iran of used or re-conditioned goods.

CHAPTER X—DOMESTIC TRADE

The general business uncertainties which effected the domestic economy during the first half of 1955 continued in the second half of the year. Although business picked up in early fall of the year, a temporary suspension of foreign exchange sales by Bank Melli in October caused another wave of depression among merchants. Local business attributed the "business crisis" to a combination of the following factors: The above mentioned shortage of foreign exchange, overstocking of certain imported goods coupled with a decrease in the demand for these and certain other goods, a decline in exports in comparison to the previous year, the high rate of interest demanded by bazari moneylenders, the falling off in purchases of consumer goods in the provinces, and over commitments by local merchants on the basis of promissory notes.

Despite the above dislocations local sales of luxury goods such as automobiles, radios, refrigerators, oil heaters, oil stoves, and even tape recorders were excellent. Construction boomed in Tehran and in certain provincial cities, with the corresponding heavy demand for non-steel cement and other construction materials. Even to the casual observer Tehran seemed to be growing visibly. Ample quantities of sugar were on hand to meet local demand, and the availability of sugar is always a stabilizing factor in Iran so long as the price line is maintained.

One healthy sign during this period was the sharp decrease in land speculation. Land in Tehran continued to bring relatively high prices, but the demand for land outside the city limits fell appreciably.

In general, the calendar year 1955 witnessed ups and downs in the local business community which were far sharper than in the immediately preceding years. Looking at the situation from the point of view of the foreign exporter to Iran, this country is and will continue to be an excellent market.

CHAPTER XI--FOREIGN TRADE

Iran imports almost all her requirements of manufactured goods from abroad, the largest and most important imports being sugar, tea, cotton piece-goods and cement. Even the few items of consumer goods that are produced indigenously find it difficult to compete against foreign goods. Iran's exports consist of agricultural products such as rice, opium, cotton, wool, dried fruits, hides and skins, and carpets. U.S.A., West Germany, France, Japan, U.K. and U.S.S.R. are the most important suppliers of Iran's imports, while Iran's exports go mainly to West Germany, U.S.S.R., Japan, Italy and U.S.A., and also to some East European countries with whom Iran has barter agreements. From the official statistics maintained by the Iranian Customs for the year 1954-55 it appears that in terms of total trade U.S.A. stood first. 18.5 per cent of Iran's total trade was with U.S.A. Germany (16.1 per cent), U.S.S.R. (9.6 per cent), Japan (9.4 per cent), and U.K. (8 per cent) followed close behind.

India's share in the imports into Iran was about 8 per cent and in export from Iran was between 2 and 3 per cent. The U.S. share in Iran's imports during 1954-55 was 24.3 per cent, followed by Germany (17.3 per cent), and Japan (9.9 per cent), Germany was the best customer for Iran's exports with 14 per cent of the total, and the Soviet Union followed closely with 13.9 per cent. France was Iran's third best customer taking 10 per cent of Iran's total exports. Japan came fourth, and U.S.A. and Italy tied for the fifth place with 8.5 per cent each.

During the latter half of 1955 the volume of trade of Iran was considerably larger than in the same period of 1954. For example, sales of commercial exchange by the Bank Melli Iran amounted to over \$97 millions in the second half of 1955 as compared with \$53 millions for the same period of 1954. A number of quotas, such as those for passenger automobiles and textiles, were exhausted relatively early in the Iranian year. In contrast to previous years, quotas were not raised by the Government because of heavy imports early in the year and a temporary shortage of foreign exchange in the fall. In fact, it was necessary for the Bank Melli to suspend sales of foreign exchange early in October and, although this proved to be of short duration, it caused some concern among Iranian importers as well as foreign suppliers. Inventories were high for certain goods (principally textiles), although the market for cars, trucks, tyres, tubes, pharmaceuticals, machinery, iron and steel, household appliances and chemicals remained good. The demand for passenger automobiles, for example, was not satisfied at the time the quota was exhausted, despite heavy imports during the first three months of the Iranian year, i.e. March to June, 1955. Motor cars, tyres and tubes, pharmaceuticals, rayon fabric and nylon goods continued to enjoy a favourable position in the Iranian market. In the textile market, inventory problems developed in the spring of 1955, due to the arrivals of Japanese and Soviet textiles, the latter under the barter agreement between Iran and the Soviet Union. Germany and Great Britain were particularly active in the sales of machinery and chemicals.

Iranian cotton, one of Iran's chief exports, enjoyed a less favourable market in Germany, U.K., Italy and Japan. Only France continued to buy Iranian cotton in approximately the same quantity as in the previous year. This decline

in foreign demand for Iranian cotton, coupled with an increase in production, led to a significant price drop and dislocation in the economy. As the Soviet Union did not purchase her usual requirements of Iranian rice, the Government was faced with the problem of disposing of surplus rice estimated at approximately 35,000 tons.

Other Iranian products, such as gum tragacanth, goat hair, hides and skins, and dried fruit, enjoyed good markets as the export season began. Because of frost damage and the resulting decline in export availabilities, dried fruits were bringing unusually high prices in domestic and foreign markets. Iranian carpets suffered a further slight decline in price as present designs are not very much liked in Western countries.

CHAPTER XII—INDIA'S POSITION IN IRAN'S FOREIGN TRADE

India's share in Iran's total imports is about 8 per cent and it is between 2 and 3 per cent in Iran's exports. The trade between Iran and India is, however, confined to traditional items like tea, textiles, jute goods and spices from India, and dried fruits and herbs from Iran. Of her total requirements of 12,000 tons of tea per annum, India supplied 7,000 tons. Considerable reduction in import of tea was observed in the year 1952-53 when a special encouragement to tea cultivation in this country was given and during this period 5,560 tons was imported against 10,914 tons of tea earlier. On September 22, 1954 Government issued a decree which permitted import of tea by following categories of importers—

- (1) Those who are in possession of tea producing plants and produce good quality tea in Iran will have permission to import half a kilo of tea from abroad against each kilo of tea they produce.
- (2) Licences for 5,500 tons of tea will be distributed to other classes of importers in the following manner—
 - (a) The importer must apply within 45 days from the date of the issue of the above quota.
 - (b) The importers of tea must pay an additional Rs. 45 per kilo of imported tea besides payment of all expenses and customs duties. This additional sum is meant to meet emergency relief.
 - (c) No importer of tea will be permitted to import tea more than 25 tons, and the import licence is not transferable.
 - (d) The Government reserves the right to buy tea in case it becomes scarce and the price goes high in order to restore normality.

This decree was, however, withdrawn on February 6, 1955 by which the Government allowed free import of tea till May, 1955, without any quota restrictions. As regards tea already stored in the customs warehouses, the Government authorised its release on payment of a sum of Rs. 55 per kilo in addition to import duty. As regards tea growers or those who have processing facilities, they were allowed to import foreign tea quantities equal to their overall output and such importers were exempted from the commercial profit tax of Rs. 20. Export of domestic tea has also been made free. Also duty on packing of Rs. 5 on foreign tea was abolished. The following categories of taxes are normally levied on import of tea in Iran—

	Customs tariff	Monopoly tax	Commercial profit tax	Other taxes
Chinese tea ..	Rls. 30 per kilo	Rls. 5.6 <i>plus</i> 1 per cent on the total value of import	Rls. 20 per kilo	3 per cent Municipal tax; 1 per cent Charity (on all imported goods including tea.
Other tea ..	Rls. 14 per kilo	Do.	Do.	Do.

Owing to this liberalisation of the tea import, the various traders, who were not in this trade at all, imported large quantities of tea into Iran as this item is the most profitable trade in Iran. This resulted in heavy accumulation of stocks at Khorramshahr port as well as in the godowns of individual tea dealers. It is estimated that about 4,000 tons of tea would be lying at Khorramshahr and nearly 2,000 tons with the tea merchants here. The international drop in prices of tea also affected the tea market here. This drop of price along with the accumulated stocks of tea in hand compelled the merchants to sell their stocks at a loss of between Rls. 20 and 30 per kilo. During this period, the average selling price of Ceylon tea inclusive of 121 days of interest for delivery was between Rls. 300 and Rls. 320 per kilo. Indian tea was sold between Rls. 260 and Rls. 290 per kilo. Owing to this depression these were being sold by the merchants between Rls. 280 and Rls. 300 for Ceylon tea and Rls. 230 to Rls. 260 for Indian tea. The position at present however is a bit different with regard to Ceylon tea. Ceylon tea is now being sold in Ceylon between Rs. 4/- and 4 12/ per lb. whereas for Indian tea the price varies between Rs. 4 8 and 5/5 per lb.

Owing to this heavy accumulation of tea in Khorramshahr and with other importers, on May 7, 1955, the Government of Iran issued an order that import of tea would not be allowed on sight drafts but only against letters of credit and on the authority of an import permit to be issued only to local growers. Accordingly, all previous decrees were amended. In other words, only the producer of good quality tea would have the right to import tea (each kilo of tea that he produces equals to 1 kilo of foreign tea). The commercial profit tax of Rls. 20 was also withdrawn in their favour. The Government of Iran, however, allowed import of tea against exchange accrued on category II export items. According to Government orders, none of the general importers of tea are allowed to sell the tea directly to the market but through the packers (who have facilities for blending and packing tea). Only four firms in Iran had such facilities. Since the restriction on import of tea was lifted in February 1955, the Commercial Secretariat of this Embassy took up this packing clause with the Ministry of National Economy and other appropriate authorities and pointed out the difficulties experienced mainly by the Indian traders in this respect. The Government of Iran withdrew the packing clause on tea, that is to say, an importer who has imported tea is free to sell directly into the market and not through those few packing firms.

As regards textiles, the market was flooded to the extent of 49 million and 35 million metres by the Soviet Union and Japan, respectively. These accumulated stocks represent two years' consumption of the country. This has resulted in the closure of some important Iranian textile mills in Isfahan. The Government have, therefore, stopped all further imports of cloth. Another factor is there is a monopoly tax of Rls. 30 per kg. levied by the Government on all foreign textiles except on mercerised cloth, shirtings and bed-tickings. The duties on various types of Indian cloth have gone up as under—

Longcloth (bleached)	Increase of Rls. 5 per yard.
Mulmul	Increase of Rls. 2.2 per yard.

Dyed longcloth	--	Increase of Rls. 5.5 per vard.
Printed sheetings	Increase of Rls. 2.5 per yard.
Voiles	Increase of Rls. 1.5 per yard.

(Rls. 15.75=Re. 1)

In view of the above-mentioned accumulated stock position, the importers of Russian and Japanese cloth in Iran are now disposing of their stocks at much lower rates, and most of these have been consumed during the Iranian New Year (Nowrooz). It is expected that the market will be normal by the end of 1956.

In the field of jute goods, Pakistan was our most important competitor. The price of Pakistani B-twills bags is cheaper than the Indian price, the former being Rls. 27 to 34 per bag compared to Rlf. 31 to 38 per Indian bag.

Apart from these traditional items, Iran is a potential market for many of our manufactures and semi-manufactures, like chemicals, machinery and millwork, electrical goods, rubber goods, vegetable oils, plastic goods, paper goods, etc. Iran imports all these items from abroad in considerable quantities, but there has not been any appreciable export of these items from India. The Indian Trade Delegation's visit to Iran in 1954 has gone a long way in removing ignorance about India's industrial potential. Their discussions with the various Government departments and the Chamber of Commerce as well as traders have brought to light India's recent progress, and constant enquiries are received by the Trade Section on various items of interest.

CREDIT SYSTEM

Iran is bound to have an improved financial position with the inflow of oil income and its adequate distribution to its various projects. A country which is extending better facilities of trade at present will definitely gain in the long run. The traders should be advised to give terms of credit particularly for any new item they would like to introduce here excepting the traditional trade which we have with Iran.

BARTER AND CLEARING AGREEMENTS

The Government of Iran has entered into various barter and clearing agreements with various countries like U.S.S.R., Czechoslovakia, Hungary, Poland, Germany, France, Italy and Japan. These countries according to their agreements bring in enormous quantities of consumer goods like cotton piece-goods, sugar, cement, newsprint, as well as other iron and steel products in lieu of import of Iranian rice, cotton, wool, opium, tobacco, dried fruits, animal skins, etc. It may be stated here that the recent setback in the textile factories in Iran as well as of import of cotton piece-goods in this country is due to the import of Russian and Japanese cloth into this country against existing barter agreements.

APPENDIX III

STATISTICS SHOWING AREA UNDER CULTIVATION AND PRODUCTION OF TOBACCO
DURING THE RECENT FIVE YEARS

Year	Tobacco for Cigarettes		Tobacco for pipe		Tobacco	
	Area under cultivation	Quantity	Area under cultivation	Quantity	Area under Cultivation	Quantity
	Hectares	(Kilos)	Hectares	(Kilos)	Hectares	(Kilos)
1,329 (1950-51)	13,149	5,839,190	3,974	3,974,482	1,415	2,121,461
1,330 (1951-52)	11,265	7,385,930	2,341	2,341,179	1,106	1,645,088
1,331 (1952-53)	13,351	10,129,955	2,879	2,579,511	919	1,378,121
1,332 (1953-54)	15,150	15,561,197	1,876	1,876,445	804	1,206,388
1,333 (1954-55)	14,755	9,901,816	1,607	1,607,365	618	927,141

APPENDIX IV

STATISTICS SHOWING PRODUCTION OF SUGAR AND LUMP SUGAR BY SUGAR
FACTORIES OF IRAN DURING 1333 (1954-55)

Name of the sugar factories	Beet roots consumed in tons	Lump sugar produced in kilograms	Granulated sugar produced in kilograms	Total of production
1. Abkough (at Khorassan)	102,276	6,425,625	8,125,000	14,550,625
2. Shahabad (at Kermanshah)	42,263	5,868,691	110,000	5,978,691
3. Shiraz (at Arak)	40,004	5,393,011		5,393,011
4. Kahrizuk (at Teheran)	Because of fire, the refinery has only been able to transform Kg 480,830 of granulated sugar into lump sugar			
5. Kuy (at Teheran)	31,321	3,417,920	393,450	3,811,370
6. May Dasht (at Shiraz)	100,514	6,116,722	7,900,000	14,016,722
7. Rezaieh (at Tabriz)	31,120	4,205,980		4,205,980
8. Mirandoab (at Tabriz)	46,268	6,667,500		6,667,500
9. Toibat Heydari	47,931	5,951,425	1,000,000	6,951,425
10. Fessr (at Shiraz)	2,199	74,831	74,100	148,931
Total	113,887	44,121,705	17,602,550	61,724,255

APPENDIX V

STATISTICS SHOWING PRODUCTION OF LEAVES PREPARED BY THE MONOPOLY OF TOBACCO

Number = 1,000
Weight = Ton

Items	1329 (1950 51)		1330 (1951 52)		1331 (1952 53)		1332 (1953 54)		1333 (1954 55)
